

Onyx Care

Onyx products remain clean with minimal efforts. A simple weekly cleaning is often more than enough to keep a shower or vanity top looking new. Most household cleaners work well with Onyx. Just be sure that the cleaner is non-abrasive (no grit in the cleaner). A surface protectant will keep water spots and deposits from forming and can make cleaning an Onyx shower even easier.

Frequently used cleaners include White Vinegar, Eliminate Shower Tub & Tile Cleaner, CLR Kitchen & Bath, Scrubbing Bubbles, Clorox cleaners or wipes, Lysol, Clean Shower-Daily Shower Cleaner. It is best to avoid traditional cleaners such as Soft Scrub, Comet, The Magic Eraser, or similar cleaners with a “gritty texture.”

The simplest option is white vinegar which is a natural cleaner. White vinegar often works the best when faced with hard water/soap film deposits. It is recommended to use straight white vinegar with a sponge or a nylon/plastic bristle scrub brush. For extreme situations with stubborn mineral or soap buildup, try soaking a paper towel or two in straight white vinegar and lay on the affected area for 30 minutes. Follow up with a scrub brush to break down and remove any excess build-up. It may take a couple of treatments when hard water build up is thick.
